opoczno

— 1883 —

Pragniemy, aby nasze wnętrza były piękne, przyjemne i wyjątkowe. **Dążenie do piękna** stanowi motto marki Opoczno, tworzącej od ponad 130 lat kolekcje, które z jednej strony łączą światowy design, a z drugiej są spełnieniem oczekiwań konsumentów. W oparciu o aktualne światowe trendy we wzornictwie, co roku przygotowujemy nowe kolekcje, dzięki którym każde wnętrze może być niepowtarzalne.

Przy tworzeniu kolekcji marka Opoczno bazuje na dwóch podejściach – nowoczesnym designie oraz sprawdzonej klasycie. Kolekcje z linii **classic** czerpią inspirację z klasyki i stanowią dowód na to, że to co zostało dobrze zaprojektowane, staje się ponadczasowe. Domeną tej linii jest bezpieczna, stonowana kolorystyka, będąca idealnym tłem dla innych przedmiotów znajdujących się we wnętrzu. Kolekcje **modern** to połączenie odważniejszych, bardziej wyrazistych kolorów oraz mieszanki różnych materiałów, jak na przykład szkła i ceramiki, z prostym i nowoczesnym wzornictwem.

Dbłość o detale, najnowsze techniki zdobnicze, najwyższa jakość produktów oraz wyjście naprzeciw zmieniającym się potrzebom klientów, sprawiają, że nasze kolekcje znajdują coraz więcej zadowolonych odbiorców i zdobią coraz większą ilość polskich i zagranicznych domów.

Od kilku lat marka Opoczno otrzymuje prestiżowe nagrody Superbrands, które zaliczają ją do elitarnego grona najsilniejszych marek. Są to nagrody **Superbrands** i **Superbrands Created in Poland**, przyznawane nie tylko przez specjalistów z branży, ale przede wszystkim przez konsumentów. I to właśnie uznanie i zadowolenie naszych klientów cieszy nas najbardziej. Jeszcze raz dziękujemy za zaufanie.

We desire for our interiors to be beautiful, pleasant, and exceptional. **Striving for beauty** is the motto of the Opoczno brand, which for more than 130 years has been creating collections that on the one hand represent world-class design and on the other fulfil our consumers' expectations. Based on current world design trends, we prepare new collections every year, thanks to which every interior can be one-of-a-kind.

The creation of the Opoczno brand collections is based on two approaches: modern design and well-tested classics. Collections in the **classic** line draw inspiration from classic designs, and offer proof that truly good design work becomes timeless and never goes out of style. This line features safe, low-key colour schemes, providing an ideal background for other objects situated within an interior. The **modern** collections combine bolder, more distinctive colours, mixtures of different materials (for example glass and ceramic), and simple, modern designs.

Concern for details, the latest decorative technologies, the highest quality, and our efforts to stay on top of our customers' changing needs all mean that our collections are finding more and more satisfied buyers and decorating more and more Polish and foreign homes.

For several years, the Opoczno brand has been receiving prestigious awards, placing it among an elite group of the strongest brands. These are the **Superbrands** and **Superbrands Created in Poland** awards, which are given not only by specialists from the industry, but above all by consumers themselves. It is this appreciation from our customers, their satisfaction, that pleases us the most. We are grateful for the trust placed in us.

OCHRONA ANTYBAKTERYJNA ANTI-BACTERIAL PROTECTION

Nowatorski sposób na eliminację 99,8% bakterii

Smart Silver® to technologia opatentowana przez amerykańską firmę NanoHorizons Inc. w Pensylwanii. Została ona opracowana na bazie wyników wieloletnich badań naukowych, prowadzonych w dziedzinie ochrony antybakteryjnej.

Korzystając z efektów tych badań oraz udostępnionej technologii, wdrożyliśmy innowacyjne rozwiązanie, które bazuje na bakteriobójczym działaniu srebra. Podczas procesu szkliwienia wykorzystujemy dodatkowo jony srebra, które oprócz właściwości bakteriobójczych zabijają także szkodliwe dla zdrowia grzyby oraz pleśń. Wytworzona powłoka eliminuje nawet do 99,8% bakterii i grzybów. Warstwa ta jest odporna na ścieranie, nie zanika ani nie zużywa się i zachowuje swoje właściwości przez cały okres użytkowania płytek.

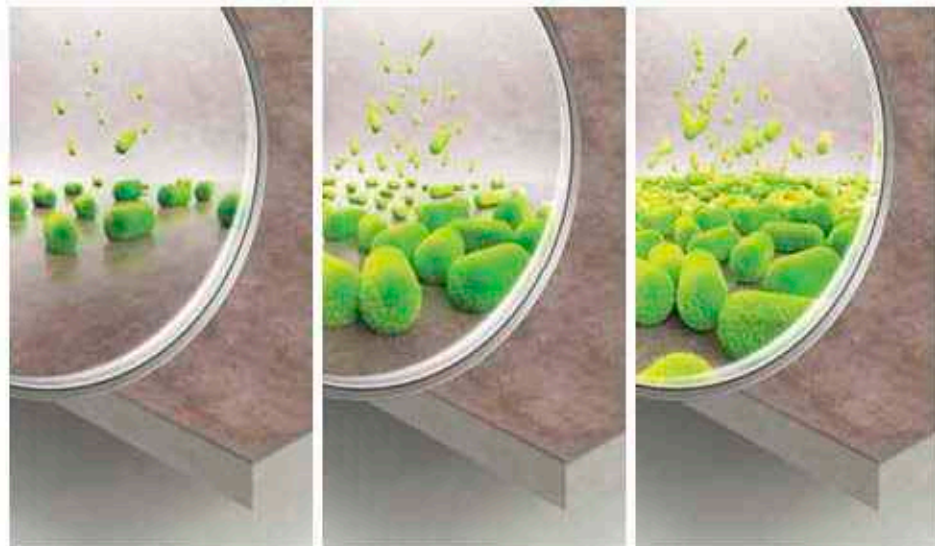

A revolutionary way to eliminate 99.8% of all bacteria

Smart Silver®, an advanced technology patented by the US-based company NanoHorizons in Pennsylvania, was developed through years of scientific research on antibacterial protection.

We have harnessed these advances to create innovative products utilizing the bactericidal properties of silver. During the glazing process we use silver cations, which have strong anti-bacterial properties and also eliminate harmful fungi and mold. The coating so created can eliminate even as much as 99.8% of bacteria and fungi. The tiles are also highly resistant to abrasion, wear, and fading, and retain these properties throughout their lifespans.

grupa 1

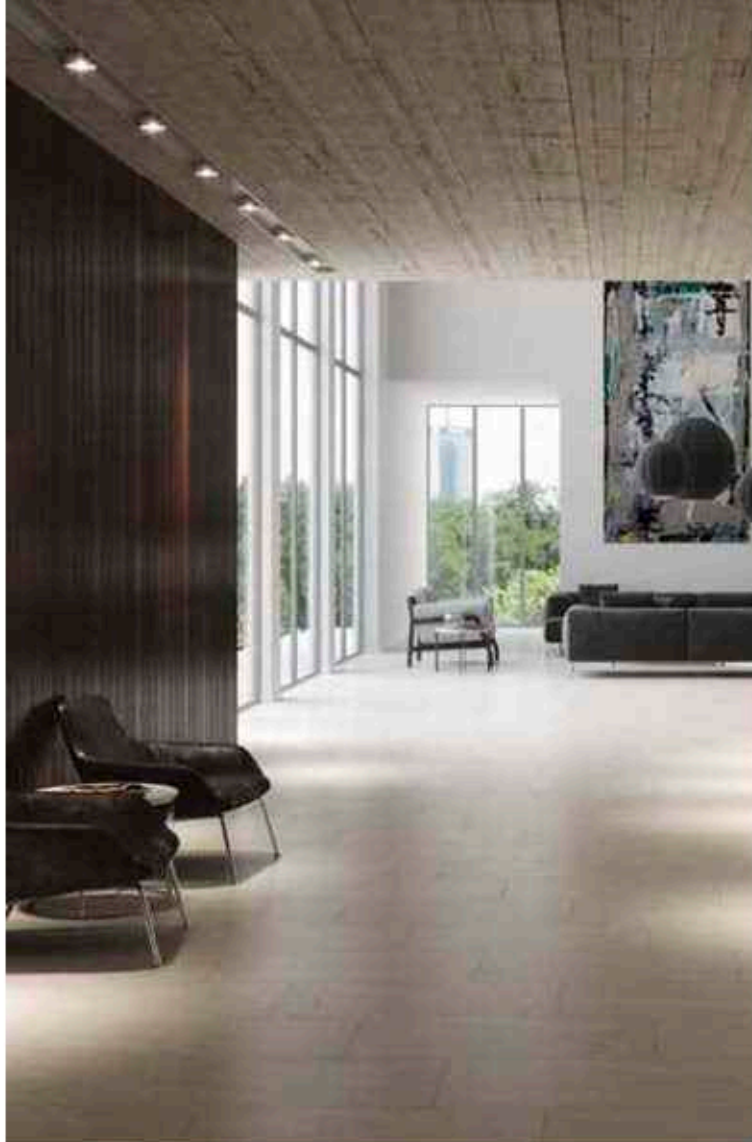

GRESY NIESZKLIWIONE

UNGLAZED PORCELAIN TILES

Gres nieszkliwiony charakteryzuje się jednorodną, zwartą strukturą w całej swojej grubości. Dzięki temu, nawet intensywne wieloletnie użytkowanie nie powoduje zmiany barwy i struktury płytek. Twardość gresu nieszkliwionego jest zbliżona do twardości granitu, co zapewnia mu dużą odporność na ścieranie, a dzięki niskiej nasiąkliwości wodnej, jest mrozoodporny. Zastosowane materiały oraz technologia produkcji powodują, że gres nieszkliwiony może być stosowany na powierzchniach o najwyższym natężeniu ruchu.

Unglazed porcelain tiles are characterized by a dense uniform structure throughout the body of the tile. Even when subjected to intensive use for many years, such tiles do not change their color or structure and their hardness is similar to that of granite, which makes them highly resistant to abrasion. Low water absorption, in turn, translates into frost resistance. The materials and technologies applied in the production of unglazed porcelain tiles make them suitable for surfaces with even the heaviest traffic.

g1

grupa 3

PŁYTKI ŚCIENNE

WALL TILES

Powierzchnia płytek ściennych pokryta jest cienką warstwą szkliwa, co zabezpiecza je przed zaplamieniem, ułatwia utrzymanie w czystości oraz zapewnia maksymalną higienę podczas użytkowania. Gwarantuje też zachowanie pierwotnego koloru w całym okresie eksploatacji. Dzięki nieograniczonym możliwościom technologicznym zdobienia można uzyskać płytki praktycznie w każdym kolorze i o dowolnym wzornictwie oraz o różnym wykończeniu powierzchni: błyszczące, matowe, strukturalne.

Wall tiles are covered with a thin layer of glaze to ensure stain resistance, easy cleaning, and maximum hygiene. Such tiles will retain their original color throughout their useful life. Offering unlimited decoration possibilities, wall tiles are available in practically all colors, motifs, and surface finishes: glossy, matte, and textured.

g3

grupa 2

GRESY SZKLIWIONE

GLAZED PORCELAIN TILES

Gres szklwiony zachowując większość zalet gresu nieszkliwionego, ma przy tym niemal nieograniczone możliwości wzornicze. Dzięki cienkiej, ozdobnej warstwie szkliwa może mieć dowolny kolor, wzór a nawet strukturę. Szkliwo zabezpiecza również przed trwałym zabrudzeniem podczas użytkowania. Gres szklwiony o najwyższej klasie ścieralności może być stosowany nawet w miejscach, gdzie natężenie ruchu jest bardzo wysokie. Jest idealny do zastosowania w miejscu, gdzie wysokie walory estetyczne płytek powinny łączyć się z najwyższymi parametrami technicznymi.

In addition to retaining most of the advantages of unglazed surfaces, glazed porcelain tiles provide virtually endless design possibilities. A thin layer of decorative glaze may come in any color, pattern, and texture. Glazing also protects tiles from permanent staining. Glazed porcelain tiles with the highest wear resistance ratings may be used even in areas with very intensive traffic. They are perfectly suited to spaces requiring finishes that combine esthetic design and top-notch technical ratings.

g2

CECHY PRODUKTÓW
PRODUCT FEATURES

WYJĄTKOWA ESTETYKA UNIQUE ESTHETICS

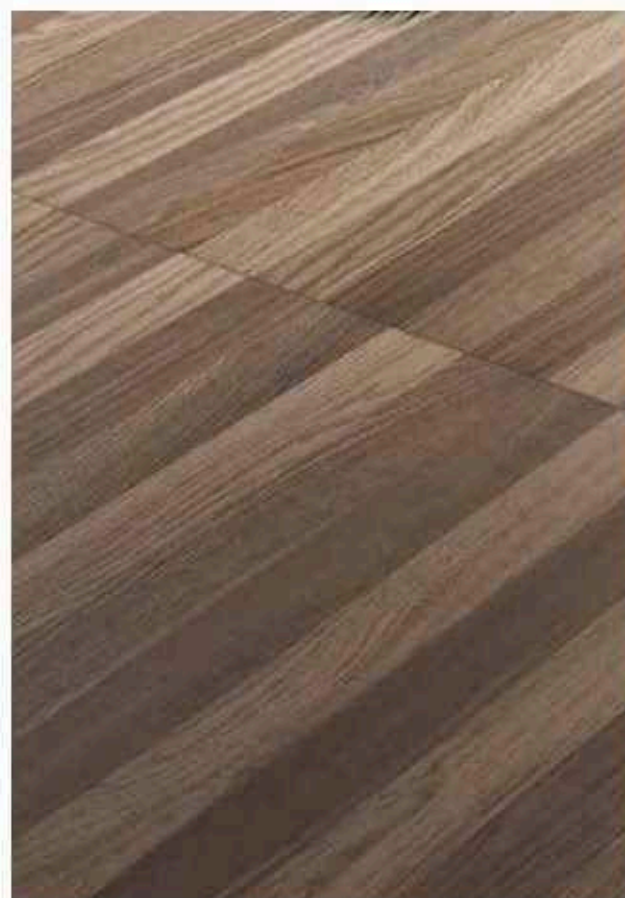

p#
014
015

MODULARNOŚĆ MODULAR FIT

Uzupełniające się formaty płytek z tej samej kolekcji można łączyć ze sobą z zastosowaniem stałej szerokości fug. Dzięki różnorodności wymiarów płytek, zwiększają się możliwości tworzenia unikalnych kompozycji.

Multi-format tiles from the same collection may be combined, using the same grout joint width. Various size options open up greater possibilities for creating unique compositions.

g1 g2

DRUK CYFROWY DIGITAL PRINTING

Nowoczesna technologia druku cyfrowego umożliwia precyzyjne odwzorowanie na powierzchni płytek grafiki naturalnych materiałów, takich jak np. drewno czy kamień. Daje także możliwość wykonania dużej liczby płytek z niepowtarzającym się wzorem w ramach tej samej kolekcji, co znacznie podnosi estetykę pomieszczenia.

Modern digital print technologies can faithfully reproduce the graphics of natural materials such as wood and stone on the surface of tiles. They also make it possible to manufacture large amounts of tiles with unique motifs within the same collection, for beautifully designed rooms.

g2 g3

REKTYFIKACJA PERFECT EDGE SYSTEM

Rektyfikacja to proces przydinania i szlifowania krawędzi płytek, sterowany komputerowo. Dzięki temu otrzymujemy płytki o idealnych wymiarach. Pozwala to na zastosowanie fug o minimalnej szerokości, a co za tym idzie, jeszcze lepsze wyeksponowanie naturalnego piękna wzoru i faktury płytek oraz uzyskanie efektu jednolitej powierzchni.

Through a computer-controlled process of cutting and edge-grinding to produce tiles that are exactly the same size. Rectified tiles can be therefore installed with minimum grout joints to better highlight the natural beauty and texture of the tiles and achieve a seamless look.

g1

g2

g3

BARWIONA BAZA COLORED BODY

Zastosowanie podczas procesu produkcyjnego barwionej bazy, która może być dopasowana do tonacji szkliwa, znacznie zwiększa estetykę płytek rektyfikowanych. Ich precyzyjnie sfazowane krawędzie mają identyczny kolor jak powierzchnia całej płytki.

Pigments added to the tile mixture ensure that the glaze color will match the color of the tile body, significantly improving the esthetics of rectified tiles. Precision-chamfered edges show coloring identical to the surface of the whole tile.

g1

g2

POLEROWANIE POLISHED SURFACE

Proces mechanicznego polerowania płytek powoduje, że ich powierzchnia jest idealnie gładka oraz błyszcząca, sprawiająca wrażenie lustrzanej. Ciekawa estetyka tych płytek prezentuje się wyjątkowo efektownie, zarówno na ścianach, jak i na podłogach. Płytki polerowane to również świetne uzupełnienie powierzchni, na której zastosowano płytki matowe.

Smooth and shiny, mechanically polished tiles are characterized by a mirror-like surface. Interesting design options add an exceptional elegance to both walls and floors. Polished tiles are also a great complement to settings incorporating tiles in matte finishes.

g1

g2

CECHY PRODUKTÓW
PRODUCT FEATURES

RÓŻNORODNE ZASTOSOWANIE VARIETY OF APPLICATIONS

ANTYPOŚLIZGOWOŚĆ SLIP RESISTANCE

Strukturalna lub pokryta granulatem powierzchnia płytek oprócz walorów estetycznych zapewnia doskonałą ochronę antypoślizgową. Przekłada się ona na bezpieczeństwo i pewność użytkowania płytek w różnych warunkach. Możemy stosować je również bez obaw w miejscach o zwiększonym natężeniu ruchu. Skuteczność antypoślizgowa płytek OPOCZNO została potwierdzona normą DIN 51130.

In addition to esthetic values, textured or granulated tile surfaces provide excellent slip resistance, which makes such tiles reliable and safe in different conditions. Slip resistant tiles can be installed in high-traffic areas. The slip resistance of OPOCZNO tiles is compliant with DIN 51130 standards.

g1 g2

OGRZEWANIE PODŁOGOWE FLOOR HEATING READY

Płytki gresowe dzięki bardzo niskiemu współczynnikowi cieplnej rozszerzalności liniowej doskonale sprawdzają się w pomieszczeniach z ogrzewaniem podłogowym. Współczynnik ten dla gresu szklwionego i nieszkliwionego Opczno jest zgodny z wymaganiami normy PN-EN ISO 10545-8.

Porcelain tiles have very low linear thermal expansion coefficients, so they are perfectly suited for interiors with floor heating. Linear thermal expansion coefficients for Opczno's glazed and unglazed porcelain tiles are consistent with the requirements of the PN-EN ISO 10545-8 standard.

g1 g2

WEWNĄTRZ I NA ZEWNĄTRZ INDOOR & OUTDOOR

Bardzo niska nasiąkliwość wodna oraz związana z tym parametrem mrozoodporność i wysoka wytrzymałość mechaniczna powoduje, że gres jest najbardziej uniwersalnym materiałem wykończeniowym. Płytki gresowe nadają się zarówno do wnętrza, jak i na zewnątrz. Równie dobrze sprawdzą się na tarasie i elewacji, jak też w łazience, kuchni, czy salonie.

Low water absorption rates and the related high resistance to frost and mechanical wear make porcelain tiles the most universal finishing material for both interior and exterior settings. They are equally well-suited to terraces and building façades as well as bathrooms, kitchens, and living rooms.

g1 g2

ŚCIANY I PODŁOGI WALLS & FLOORS

Uniwersalne wzornictwo, nowe techniki zdobienia oraz doskonałe parametry techniczne umożliwiają stosowanie płytek gresowych, zarówno na ścianach, jak i na podłogach. Gres staje się materiałem uniwersalnym, który można stosować praktycznie na każdej powierzchni i we wszystkich rodzajach pomieszczeń.

Universal design combined with new decoration techniques and top technical ratings make porcelain tiles suitable for both walls and floors. Porcelain tiles are universal materials that can be installed practically on any surface and in any setting.

g1 g2

CECHY PRODUKTÓW
PRODUCT FEATURES

PODWYŻSZONA TRWAŁOŚĆ GREATER DURABILITY

WYTRZYMAŁOŚĆ EXTRA-STRONG

Płytki gresowe, dzięki wyjątkowo niskiej porowatości oraz procesowi formowania ich pod bardzo dużym ciśnieniem, cechują się doskonałymi parametrami wytrzymałościowymi. Podwyższona odporność mechaniczna daje możliwość stosowania ich w pomieszczeniach, w których występują ponadprzeciętne obciążenia. Wytrzymałość na zginanie oraz siła łamiąca spełniają wymagania normy PN-EN ISO 10545-4.

Formed under very high pressure, porcelain tiles are characterized by exceptionally low porosity and excellent resistance. Greater mechanical resistance means that porcelain tiles tolerate high loads. Requirements of the bending and breaking strength are defined in the standard PN-EN ISO 10545-4.

g1

g2

MROZODPORNOŚĆ FROST RESISTANCE

Wszystkie gresy naszej produkcji cechują się minimalną wchłaniałością wody i niską porowatością dzięki czemu są odporne nawet na skrajnie niskie temperatury. Można je stosować praktycznie w każdych warunkach pogodowych. Mrozoodporność gresu Opoczno potwierdzona jest badaniem wg normy PN-EN ISO 10545-12.

All porcelain tiles produced by Opoczno are characterized by minimal water absorption rates and low porosity, which makes them resistant even to extremely low temperatures. Such tiles can be used in practically any weather conditions. The frost resistance of Opoczno's porcelain tiles has been confirmed by tests consistent with the PN-EN ISO 10545-12 standard.

g1

g2

HPHIGH
PERFORMANCE**NAJWYŻSZE PARAMETRY
HIGH PERFORMANCE**

Płytki szklione o najwyższej, 5 klasie ścieralności oraz gresy nieszkliwione i zdobione w masie spełniają najwyższe wymagania jakościowe. Można je stosować na powierzchniach o wyjątkowo dużym natężeniu ruchu oraz wymagających wysokiej odporności na obciążenia.

Glazed tiles in the highest, fifth abrasion class and the unglazed porcelain tiles meet the highest quality requirements. They can be used on surfaces with extremely high traffic and requiring high resistance to load.

**GWARANCJA
WARRANTY**

Wszystkie płytki Opoczno objęte są 6-letnią gwarancją. Gwarantujemy zachowanie parametrów technologicznych i użytkowych określonych w normie PN-EN 14411.

All Opoczno tiles come with a 6-year warranty and are guaranteed to retain their technical properties, as defined in the standard PN-EN 14411.

g1 g2 g3

**ZDOBIONE W MASIE
FULL BODY DECORATION**

Zastosowanie w płytkach nieszkliwionych jednoodrodnej, barwionej masy w całym przekroju płytki powoduje, że otrzymujemy bardzo twarde i odporny na zarysowania produkt. Wytrzymuje on ponadprzeciętne obciążenia występujące podczas użytkowania. Płytki wykonane w tej technologii mogą być stosowane w miejscach o bardzo dużym natężeniu ruchu, szczególnie w obiektach użyteczności publicznej, jak również w obiektach przemysłowych: halach produkcyjnych, magazynach, itp.

Using a uniform, colored mixture for unglazed tiles yields a very hard and scratch-resistant product, able to withstand extreme loads. Tiles manufactured using this technology can be used in areas with very high traffic, especially public-access spaces, as well as at industrial facilities: factory floors, warehouses, etc.

g1

**NIE WYMAGA IMPREGNACJI
NO IMPREGNATION REQUIRED**

Matowy gres nieszkliwiony naszej produkcji jest odporny na zabrudzenia, nie wymaga impregnacji.

Opoczno's matte unglazed porcelain tiles are resistant to staining and require no impregnation.

PERFECT CLEAN

PERFEKCYJNA CZYSTOŚĆ

INNOWACYJNA POWŁOKA FLUOROPOLIMEROWA

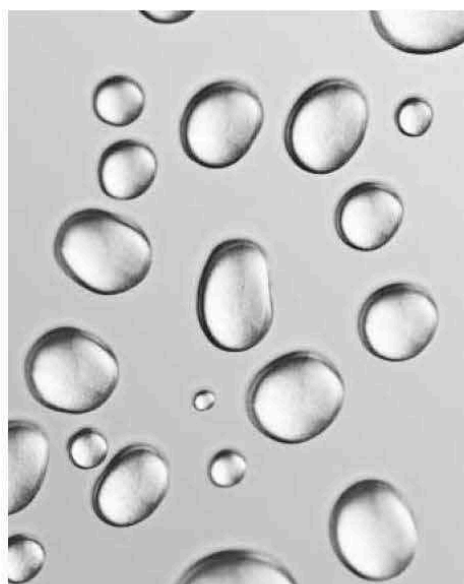

INNOVATIVE FLUOROPOLYMER COATING

Standardowa powierzchnia ceramiki tylko z pozoru jest idealnie gładka. Pod mikroskopem widoczna jest porowata powierzchnia z mnóstwem zagłębień. Substancje mineralne zawarte w wodzie osadzają się w zagłębieniach powierzchni tworząc trudny do usunięcia osad. Aplikowana w procesie produkcji powłoka **PERFECT CLEAN** niweluje porowatość powierzchni, nie dając szansy osadom. Zmniejsza również energię powierzchniową, przez co odpycha wodę, która w formie drobnych kropelek spływa swobodnie po powierzchni nie pozostawiając osadu.

Standard surfaces of ceramic tiles may seem perfectly smooth. When viewed under a microscope, however, the surface of tiles proves to be porous. Mineral substances present in water build up on the surface of tiles, leaving deposits that are hard to remove. **PERFECT CLEAN**, a coating applied to tiles in the manufacturing process, eliminates surface porosity and prevents the buildup of deposits. By reducing surface energy, it repels water, causing it to roll down the surface of tiles in small drops without leaving residue.

A modern bathroom with white ceramic fixtures, a wooden vanity, and a glass shower enclosure. The room features large white tiles on the walls and floor. A wooden vanity with a white sink and a chrome faucet is on the left. A white toilet and bidet are mounted on the wall. A glass shower enclosure is on the right. Two spherical pendant lights hang from the ceiling.

ABC PŁYTEK CERAMICZNYCH

ZASADY DOBORU PŁYTEK

Dokonując wyboru płytek, oprócz walorów estetycznych, należy wziąć pod uwagę przede wszystkim szczególne warunki, w których płytka będzie eksploatowana. Jako okładziny ścian wewnętrznych można stosować wszystkie płytki marki Opoczno. Na pokrycia podłóg wewnątrz budynków należy stosować płytki podłogowe, gresowe lub płytki klinkierowe. Przy wyborze płytek na podłogę należy mieć na uwadze przewidywane natężenie ruchu i wybrać płytki o odpowiedniej odporności na ścieranie (płytki podłogowe szklwione, gres szklwiony). W miejscach gdzie zachodzi duże prawdopodobieństwo poślizgu stosuje się płytki posiadające cechy antypoślizgowe. Przy wyborze płytek polerowanych należy pamiętać o ich szczególnie śliskiej powierzchni. W pomieszczeniach z przewidywanym dużym natężeniem ruchu zalecamy stosowanie gresów nieszkliwionych. Na zewnątrz budynków stosujemy tylko płytki gresowe lub klinkierowe, które są odporne na działanie ujemnych temperatur.

KLASA ŚCIERALNOŚCI

- 2 – produkt zalecany do pomieszczeń domowych o niskim natężeniu ruchu, np. łazienka
- 3 – produkt zalecany do pomieszczeń domowych o niskim i średnim natężeniu ruchu, typu łazienka, kuchnia, salon, przedpokój, taras
- 4 – produkt zalecany do stosowania w miejscach o normalnym natężeniu ruchu, np. budynki mieszkalne oraz użyteczności publicznej
- 5 – produkt zalecany do stosowania w miejscach wzmożonego natężenia ruchu, takich jak: centra handlowe, przejścia i korytarze, miejsca publiczne

ODCIEŃ PŁYTEK

ODCIEŃ – różnica w intensywności barwy poszczególnych dekoracji na płytce w stosunku do przyjętego wzorca. Dla gresu nieszkliwionego – różnica w ilości lub intensywności kolorowej bazy dająca zmianę wybarwienia całej powierzchni płytki w stosunku do wzorca. Oznaczenie odcienia znajduje się na każdym jednostkowym opakowaniu. Płytki przeznaczone do wyłożenia w jednym pomieszczeniu muszą zawierać takie same oznaczenia odcienia na wszystkich opakowaniach. Płytki ceramiczne oznaczone jednym odcieniem mogą posiadać niewielkie różnice grafiki wzoru i kolorystyki, wynikające z technologii produkcji. Gres nieszkliwiony polerowany i satynowany wyróżnia się niepowtarzalnością wzoru na poszczególnych płytkach. Może posiadać również niewielkie różnice barwy. Przed układaniem wszystkich ww. płytek sugeruje się rozłożenie płytek z różnych opakowań oraz ich wymieszanie. Efekt cieniowania w przypadku płytek rustykalnych jest zamierzony.

ANTYPOŚLIZGOWOŚĆ

Jest to ważna cecha dla płytek, które stosuje się jako okładzinę podłogową w warunkach wymagających zwiększonej skuteczności przeciwpoślizgowej. Płytką, która ma powierzchnię strukturalną lub reliefową ma określoną skuteczność przeciwdziałania poślizgom. O te same skuteczności informuje współczynnik R czyli kąt przy którym dochodzi do poślizgu (wg niemieckiej normy DIN 51130) Zakres kąta – klasy antypoślizgowości

- 6-10 – klasa R9
- 10-19 – klasa R10
- 19-27 – klasa R11
- 27-35 – klasa R12
- Powyżej 35 – klasa R13

CHEMOODPORNOŚĆ

W warunkach szczególnych, gdzie istnieje prawdopodobieństwo rozlania substancji kwasowych lub zasadowych ważne jest aby płytka posiadała odporność chemiczną na tego rodzaju czynniki chemiczne. Wszystkie płytki marki Opoczno badane są pod kątem odporności na kwasy, zasady oraz składniki wody basenowej. Najwyższą odporność wykazują płytki gres szklwiony i nieszkliwiony – odporne są na działanie również mocnych roztworów kwasów i zasad wg PN-EN 10545-13. Parametr ten jest istotny przy układaniu płytek w zakładach przemysłowych, w przemyśle spożywczym, chemicznym, basenach kąpielowych.

MROZOODPORNOŚĆ

Jest to parametr określający odporność płytek ceramicznych na temperatury ujemne. Płytki w trakcie badania poddawane są 100 cyklom zamrażania i rozmrażania. W trakcie rozmrażania woda penetruje w głąb płytki a w trakcie zamrażania zgromadzona woda w płytce zamraża zwiększając swoją objętość. Jeżeli płytka jest mocno spieczona tak jak gres lub klinkier to ilość zgromadzonej wody jest na tyle mała, że nie powoduje uszkodzenia płytki. Należy pamiętać, że sama mrozoodporność płytki w żadnym wypadku nie gwarantuje końcowego efektu, czyli trwałej wykładziny ceramicznej np na tarasie. O tym decyduje właściwe wykonanie prac montażowych i użycie odpowiednich materiałów budowlanych do montażu płytek na zewnątrz.

NASIAKLIWOŚĆ

Nasiąkliwość płytki to zdolność do pochłaniania i zatrzymywania wody. Jest to podstawowe kryterium dzielące płytki wg ich własności:

Grupa BIa – płytki gresowe o niskiej nasiąkliwości $E \leq 0,5\%$;

Grupa BIb – płytki klinkierowe o nasiąkliwości $0,5\% < E < 3\%$;

Grupa BIIa – płytki podłogowe o nasiąkliwości $3 < E < 6\%$;

Grupa BIII – płytki ściennie o nasiąkliwości $E > 10\%$.

Parametr nasiąkliwości jest ściśle związany ze strukturą wewnętrzną płytki wynikającą z technologii produkcji. Im mniej wolnych przestrzeni w strukturze płytki, tym mniejsza nasiąkliwość i lepsze parametry użytkowe płytki jak: wytrzymałość na złamanie, czy mrozoodporność. W warunkach użytkowania chłonność płytki może być zmniejszona przez zastosowanie odpowiednich fug. Pochłanianie wody w płytkach szklwionych następuje jedynie od strony nie pokrytej szkliwem.

ODPORNOŚĆ NA PLAMIE

To ważna cecha użytkowa, o której należy pamiętać przy wyborze rodzaju płytek, przeznaczonych do układania w miejscach narażonych na działanie substancji paliących (kuchnie, garaże, hale przemysłowe itd). Płytki szklwione z racji posiadania warstwy szkliwa na powierzchni są łatwiej zmywalne i uzyskują najwyższe klasy odporności na plamienie. Płytki gres nieszkliwiony są bardziej skłonne do zaplamień dlatego też zalecamy dla płytek nieszkliwionych pokrycie ich środkiem chemicznym ułatwiającym utrzymanie ich w czystości i chroniącym przed plamami.

REKTYFIKACJA

Proces rektyfikacji jest mechaniczną obróbką boków płytek i polega na bardzo dokładnym docięciu ich brzegów pod określony wymiar, zwykle z dokładnością do $\pm 0,3$ mm. Płytki rektyfikowane cechują się zdecydowanie większą dokładnością wymiarową niż płytki nierektyfikowane – sortowane na grupy wymiarowe. Niewielkie różnice wymiarowe pomiędzy płytkami rektyfikowanymi pozwalają na zastosowanie minimalnych fug pomiędzy płytkami tj. 1mm.

FUGI

Spoina, jest estetycznym dopełnieniem ceramicznej lub kamiennej posadzki. Fuga stanowi również swoistą dylatację pomiędzy płytkami, pozwalającą na ich minimalne odkształcenia, zwłaszcza gdy praca podłoża prowadzi do wystąpienia naprężeń np. w przypadku ogrzewania podłogowego. Fugi pozwalają też zniwelować różnice wymiarowe płytek. Szerokość fugi zależy przede wszystkim od wymiarów płytki, należy pamiętać o tym, żeby dobrać właściwy rodzaj spoiny do określonej szerokości. Miejsca wilgotne, na ogrzewaniu podłogowym lub w temperaturach ujemnych wymagają innego rodzaju fug.

TRANSPORT

Podczas transportu należy jednostki ładunkowe ustawiać ściśle obok siebie. Wolne przestrzenie należy zabezpieczyć, uniemożliwiając przesuwanie się ładunku podczas transportu.

PRZECHOWYWANIE

Płytki należy przechowywać w pomieszczeniach chroniących je przed zawilgoceniem, a w przypadku płytek niemrozoodpornych należy je chronić również przed temperaturą mniejszą lub równą 0°C . Nie uważa się za wady produkcyjne defektów spowodowanych przechowywaniem płytek niemrozoodpornych w temperaturze poniżej 0°C , bądź zmian w płytkach spowodowanych ich niewłaściwym przechowywaniem przed dokonaniem montażu.

REFERENCE GUIDE TO CERAMIC TILES

TILE SELECTION CRITERIA

When selecting tiles, apart from attractive design, it is important to take into consideration specific conditions in which a tile is going to be used. All Opoczno tiles can be used as interior wall tiling. Floors inside buildings should be laid with floor tiles, stoneware or clinker tiles. When selecting floor tiles it is important to take into consideration predicted traffic volume and select tiles with appropriate wear resistance level (glazed floor tiles, glazed stoneware). Anti-slip floor tiles are used in places with a strong risk of slipping. When selecting polished tiles remember about their slippery surface. In rooms with predicted high traffic volume we recommend using non-glazed stoneware tiles. Outside buildings we only use stoneware or clinker tiles, which are resistant to temperatures below zero degrees.

ABRASION-RESISTANCE CLASS

- 2 – product recommended for house rooms with low intensity of traffic, e.g. a bathroom
- 3 – product recommended for house rooms with low and medium intensity of traffic, e.g. a bathroom, a kitchen, a living room, a hall or a terrace
- 4 – product recommended to be applied in places of normal intensity of traffic, e.g. residence buildings and public utility buildings
- 5 – product recommended to be applied in places of increased intensity of traffic, such as: shopping centres, passages and corridors, public places

TILE SHADE

SHADE – a difference in the intensity of colours in individual decorations on a tile in proportion to the assumed pattern. Non-glazed stoneware – a difference in the amount or colour intensity of the base, which results in the change of dyeing of the entire surface of the tile in proportion to the pattern. Shade designation is placed in every single box. Tiles to be laid in one room must have an identical shade designation on all boxes. Ceramic tiles marked with one shade may have slight differences in the pattern graphics and colouring caused by manufacturing technology. Polished non-glazed and satin-finished stoneware is distinguished by the uniqueness of the pattern on the individual tiles. It also may have slight differences in colour. Before laying all the above-mentioned tiles, it is recommended to spread the tiles from different boxes and mix them. Shading effect in the case of rustic tiles is intended.

ANTI-SLIP PROPERTIES

It is a very important feature of tiles, which are used as floor tiling in the where increased anti-slip efficiency is required. Tiles with structural or relief surface have specified anti-slip efficiency. This efficiency is defined by an R coefficient – an angle at which slipping occurs (according to German standard DIN 51130).
 Angle range – Anti-slip classes:
 6-10 – class R9
 10-19 – class R10
 19-27 – class R11
 27-35 – class R12
 Above 35 – class R13

CHEMICAL RESISTANCE

In specific conditions, with a risk of spilling acid or or base it is important that a tile is resistant to these chemicals. All Opoczno tiles are examined for acids, bases and pool water components. Glazed and non-glazed stoneware tiles show best resistance – also resistance to strong solutions of acids and bases according to PN-EN 10545-13. This parameter is essential when laying tiles in industrial plants, in foodstuff and chemical industries or swimming pools.

FROST RESISTANCE

This parameter specifies the resistance of ceramic tiles to negative temperatures. During the examination, tiles are subjected to 100 cycles of freezing and defrosting. While defrosting water penetrates a tile and while freezing water accumulated in a tile freezes and increases its volume. If a tile is sintered as hard as stoneware or clinker then the amount of accumulated water is so low that it does not damage the tile. Remember that a tile's frost resistance by no means guarantee a final result – durable ceramic flooring, e.g. on a terrace. It is determined by proper installation works and using adequate construction materials for the installation of tiles outside.

ABSORBABILITY

Tile absorbability is a capacity to absorb and retain water. It is a basic criterion, which divides tiles according to their properties:

- Group BIa – stoneware tiles with low absorbability of $E \leq 0.5\%$
- Group BIb – clinker tiles with absorbability of $0.5\% < E < 3\%$
- Group BIIa – floor tiles with absorbability of $3\% < E < 6\%$
- Group BIII – floor tiles with absorbability of $E > 10\%$

Tile absorbability parameter is closely linked to the tile's internal structure resulting from manufacturing technology. The less free spaces in the structure of the tile, the less absorbability and better operating parameters of the tile, such as: fracture resistance, frost resistance. In operating conditions, the absorbing capacity of the tile can be decreased by: the application of adequate joints. Water absorption in glazed tiles takes place only from the side, which is not glazed.

STAIN RESISTANCE

It is an important performance trait, which should be taken into account while selecting the type of tiles, which are to be laid in places exposed to the activity of staining substances (in kitchens, garages, industrial facilities etc.). Glazed tiles, due to a glaze layer on the surface, are washable and achieve the highest class of stain resistance. Non-glazed stoneware tiles are more susceptible to stains, therefore we recommend coating them with a chemical, which helps to keep them clean and protects them from stains.

RECTIFICATION

Rectification is a mechanical treatment of tile sides and consists in very accurate cutting of their edges to a specified size, usually to within ± 0.3 mm. Rectified tiles are characterized by decidedly better size accuracy than non-rectified tiles sorted into size groups. Slight size differences between rectified tiles allow you to use minimum joints between tiles, i.e. 1 mm.

JOINTS

Joint is an aesthetic supplement of the ceramic or stone floor. It is also a specific expansion joint between the tiles, which allows them to deform minimally, particularly when the activity of the bed leads to stresses, e.g. in the case of floor heating. Joints enable us to level the tiles' size differences. The width of the joint especially depends on the size of the tile; it should be remembered to match the right size of the joint to the specific width. Damp places, on floor heating or in temperatures below zero require a different type of joints.

TRANSPORTATION

While transporting tiles, unit loads should be arranged tightly side by side. Free spaces should be secured to prevent from shifting the load during transportation.

STORAGE

Tiles should be stored in rooms, which protect them from moisture, and non frost-proof tiles should be also protected from temperatures lower or equal to 0°C . Defects caused by the storage of non frost-proof tiles in the temperature above 0°C , or changes in tiles caused by their improper storage prior to the installation are not considered as manufacturing defects.
