## AVISO IMPORTANTE PARA LA INSTALACION DE ESMALTES CRAQUELADOS

Debido a las características inherentes a los esmaltes cuarteados, se precisa de un cuidado adicional en el proceso de instalación y de mantenimiento. El efecto del craquelado se consigue por las tensiones entre el esmalte y la base del azulejo, creando grietas microscópicas que confieren una apariencia única.

Para proteger y mantener este aspecto, antes de proceder a la instalación del azulejo en la pared, hay que tener especial cuidado en que la superficie del azulejo se mantenga limpia.

Un vez instalado, y antes de rejuntar, se debe sellar los azulejos con un sellador penetrante y transparente. Para la aplicación del sellador, se debe seguir las instrucciones del fabricante del mismo. Se sellan las grietas del esmalte para evitar que el material de rejunte penetre durante el rejuntado. Una vez se haya rejuntado y limpiado la superficie con un trapo limpio, hay que asegurarse de que no queda ningún residuo. Será entonces cuando hay que volver a aplicar el sellador, según se indique. En el caso de que esté instalado en áreas húmedas, el sellado del azulejo craquelado se deberá efectuar anualmente, o según recomiende el fabricante del sellador.

NOTA: Sellar la superficie de forma uniforme y minuciosa. En el caso de utilizar un material de rejuntado oscuro, es aconsejable repetir el proceso antes de rejuntar.

## CRACKLED GLAZE INSTALLATION NOTICE

Due to the inherent nature of Crackled Glaze finishes, they require an additional step in the installation and cleaning process. The crackled finish effect is achieved when the glaze slightly pulls away from the body of the tile creating microscopic cracks in the glaze which allows it to have that antique & unique look. To protect and retain this look, prior to applying the tile to the wall, extra care should be taken exercised to keep the surface of the tile clean. Once installed and prior to grouting, the tiles should be sealed with a Clear Penetrating Sealer. The manufacturers of the penetrating sealers provide application instructions should be followed. This basically seals the glaze cracks to insure that the grout does not penetrate them during the grout application. After the grouting and cleaning are completed, be sure to polish off any remaining residue with a clean cloth. It will then be time to apply once again the sealer as indicated. For tiles installed in wet areas sealing of Crackled tiles should be done yearly, or as recommended by the Sealer Manufacturer.

NOTE: be sure to seal the surface of the tiles evenly and thoroughly. If using a dark color grout, it is advisable to do the initial sealing prior to grouting twice.
